

SPORTS & SECURITY FENCING SERVICES

TEAM & SPECTATOR SHELTERS

AlphaFence now constructs a range of custom-built team shelters and spectator buildings to complement its range of sports fencing and accessories.

The buildings are constructed from a powder coated steel frame, roofed with colour coated box-profile roofing panels, clad in front with smooth phenolic-faced sports rebound plywood boards (and optional kickboards), and to the rear and sides with rustic overlapping vertical timber boarding. Steelwork and cladding can be coloured to suit the adjacent fencing and/or synthetic carpet.

From initial design concept to reality . . . buildings can be customised to suit your own pitch.

Typically they are 12 metres long comprising three compartments: one each side for the home and away teams with 5 metres of timber bench seating and baggage racks; plus a 2 metre gated central area for scoring/umpire etc. An inner central door gives access to the rear (for ball retrieval).

Optionally rear access doors can be provided in the external timber cladding to give access to a significant area of secure storage behind the bench seating, e.g. for corner flags, balls and training accessories. Internal shelving and cupboards have also been provided where requested.

Each building is specific to its environment and client, so please give us a call to discuss your own particular requirements.
